

18.10 Hand Protection

If there is a potential for cuts, abrasions, burns and skin contact with chemicals, gloves, suitable for the hazard, shall be worn. (Also see Section 3.7)

18.11 OSHA Regulations

A job hazard assessment for PPE is required by 29 CFR Subpart 1, Section 1910.132 through 138. Additional PPE requirements can be located in 29 CFR Subpart E, Section 1926.95 through 107 and other regulations, such as Subpart G, K and M. The Job Hazard Assessment establishes the minimum PPE requirements for elevator industry personnel performing service and repair work.

18.12 Assessing Workplace Hazards

The employer shall assess the workplace hazards to determine where PPE is required. Use of the Job Hazard Assessment Form (NEII SC01) is recommended to help the elevator company comply with OSHA regulations. The assessment process is outlined as follows:

- (a) A Competent Person shall conduct a hazard assessment to identify hazards which require PPE and/or to verify the PPE used by the worker is sufficient. This shall be noted and documented as written certification of the assessment.
- (b) Select, and have each affected employee use, the types of PPE that will protect the affected employee from the hazards identified in the hazard assessment.
- (c) Issue and train each employee on the use and care of the required PPE and insure that each employee has properly fitted PPE.
