Section 2 SAFETY INSPECTIONS

2.1 Need for Routine Safety Inspections

Safety inspections are a must in the elevator industry and required by OSHA regulations. Such inspections shall be conducted periodically to identify unsafe work practices and conditions that could injure company employees and/or the employees of others. Reasons for normal inspections include, but are not limited to:

(a) Normal wear and tear on such items as ropes, slings, scaffold planks, hand tools and PPE.

The Competent Person on the jobsite must be aware of all potential hazards on the jobsite and take immediate corrective

- (b) Defects, damage and weather conditions.
- (c) Changing conditions and other trades on site.

2.2 Inspecting for Hazards

action. The following is a sample checklist:	
	Is Company-provided information posted at jobsite (OSHA
	emergency phone numbers, warning signs, etc.)?
	Is the site clean and free of debris? Are materials stored or
	stacked neatly and a safe distance away from your work area?
	Are Company-approved first-aid kits on the job? Are they
	periodically checked and refilled as required?
	Are emergency first-aid responders readily available or
	first-aid trained people on the job?
	Is drinking water available and container plainly marked?
	Are personnel properly wearing Company-approved persona
	protective equipment when exposed to possible danger
	(i.e., gloves, work boots/shoes, hard hats, safety harnesses,
	safety glasses, goggles, welding hoods, etc.)?
